LANDSCAPE IRRIGATION

your **garden** needs
water for life

Just imagine those long balmy summer evenings entertaining friends, enjoying a barbecue or eating al fresco in your garden. A lush oasis of rich, green grass, a plot full of strong healthy foliage and a profusion of bright vivid flowers.

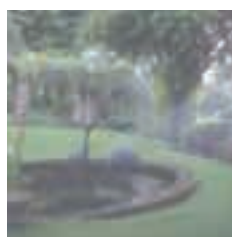

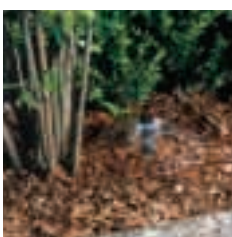

This doesn't just happen. A substantial investment of time and money is required to produce a landscape so healthy. Now it needs regular attention to maintain its beauty.

How? That's easy – Water! And what easier way than an efficient, professionally installed sprinkler system, saving water, time and effort.

Just think. No more dragging the garden hose!

No more standing and waiting until enough water is applied!

No more watering cans!

A cost effective irrigation system will ensure that the garden is watered at the most effective and efficient time of the day – early mornings or evenings when the wind and evaporation levels are low - even when holidays are taken.

Our systems are ecologically beneficial as they use up to 60% less water than when using a hose pipe thus saving water and saving money.

All types and sizes of property will benefit from an irrigation system. A flourishing, vibrant landscape will reflect the pride taken in the home adding value to the property.

Smaller gardens can now benefit from recent changes in legislation making mains watering an even cheaper and more viable option.

And it's not only lawns and borders which benefit from regular controlled irrigation.

Pot plants and containers need constant attention. An automatically controlled watering system will keep displays healthy without any fuss.

Window boxes and hanging baskets attract the attention of the discerning passer by. Help them thrive and flourish with regular watering from a reliable system. No more climbing up and down ladders with the watering can. Now relax and enjoy the balmy summer evenings.

your **business** needs
water for life

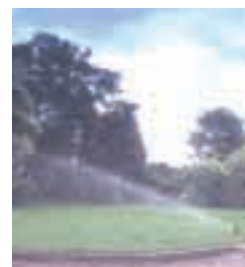

Landscape irrigation is among the fastest growing segments of today's construction industry. Modern industrial estates are designed and built to blend into the landscape. Never before has there been such a demand for commercial developments to be in harmony with their surroundings.

The addition of a beautifully crafted and well-maintained landscape within a commercial development tells the public that your company cares for the environment. The premises will have an aesthetically pleasing look to the customer and create a warm and productive working environment for staff.

Even older and longer established factories and buildings are now realising that a flourishing landscape will improve the look of their premises as they redevelop areas of concrete and tarmac into vibrant and vivid displays of plants.

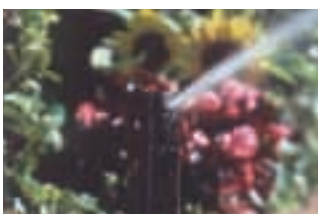

Today's modern architects and builders take special care to include landscaping in their plans with some buildings having a specially designed irrigation system to ensure the precious landscape remains healthy and flourishing.

Professional irrigation is the key to a successful landscape.

Even products supply sprinklers, sprayheads and controllers manufactured to the highest standards and designed with maximum water efficiency in mind. Gear driven sprinklers apply water slowly allowing the water to soak into the ground. The spray heads have adjustable arcs enabling directional watering onto specific areas of plants and directed away from pathways and drains. The ideal automatic sprinkler system will supply just enough water to the plant life therefore maintaining a healthy balanced environment for a flourishing landscape.

Remember the last time you visited your local park or gardens. These facilities could not exist without an effective and efficient irrigation system. Golf courses, football pitches, cricket grounds – these are all testimonials for the use of irrigation.

designed for you water for life

Innovative design, together with 50 years experience serving the irrigation industry, has contributed to the growth of our company.

Many products have been developed by our own engineers and are rigorously tried and tested before being released onto the market.

Continuous review of the market place and product range allows us to keep up with new developments and implement improvements.

Constant training, and monitoring of new and modern manufacturing techniques, keep us at the cutting edge of modern technology.

Our company is committed to research and development as we constantly strive to improve the quality and design of our products, regularly upgrading materials and introducing modern manufacturing techniques where appropriate.

Using state of the art CAD packages our experienced team will draw up full plans and provide a complete design service ensuring that your system will meet the required standards. We can

also supply components as a kit and arrange supervision or management of the project.

Installing an automatic sprinkler system is a complex task. That's why it is best to employ qualified professionals. Our network of installers are experts in hydraulics, sprinkler system layout, plant water requirements and soil types. These skills will ensure a water efficient sprinkler system and years of trouble free operation.

water for life

Our work is always backed up with an after sales service and a written warranty ensuring peace of mind for years to come.

Our modern factory operates a fully computerised works order and stock control system from which we have introduced a quality assurance system based on ISO 9000.

The extensive range of components in stock enables us to provide a prompt despatch on all stock items whilst visitors to our trade counter have the opportunity to discuss their requirements with our trained staff.

Remember:

An automatic sprinkler system will do more than keep lawn, flower beds or landscapes looking vibrant and healthy. It will also:

- Protect the investment in the landscape
- Increase property values
- Eliminate the hassles of hand watering
- Deliver the added benefit of precise watering even when holidays are taken

And because water is too precious to waste the sprinkler system may actually reduce water bills by delivering just the right amount of water to the lawns, gardens and landscapes.

- No more worrying about over or under watering
- No more wasteful run-off from the use of a hose pipe
- Programmable systems to water early in the morning or during the evening and minimise water loss due to evaporation
- Have the system set for maximum efficiency
